

大型架构及配置技术

NSD ARCHITECTURE

DAY04

内容

	09:00 ~ 09:30	作业讲解和回顾
上午	09:30 ~ 10:20	
上 午 	10:30 ~ 11:20	Kibana使用
	11:30 ~ 12:00	
	14:00 ~ 14:50	
下午	15:00 ~ 15:50	Logstash配置 扩展插件
下 午 	16:10 ~ 17:10	· · · · · · · · · · · · · · · · · · ·
	17:20 ~ 18:00	总结和答疑

Kibana使用

Kibana安装与配置

Kibana柱状图

Kibana併图

Kibana供图

Kibana供图

kibana

Kibana安装与配置

- kibana是什么
 - 数据可视化平台工具

特点:

- 灵活的分析和可视化平台
- 实时总结流量和数据的图表
- 为不同的用户显示直观的界面
- 即时分享和嵌入的仪表板

Kibana安装与配置(续1)

- kibana安装
 - kibana 的安装非常简单,我们使用 rpm 方式安装yum -y install kibana
 - kibana 默认安装在 /opt/kibana 下面,配置文件在 /opt/kibana/config/kibana.yml
 - 我们只需要修改少量的配置就可以启动

Kibana安装与配置(续2)

- kibana.yml的配置
 - server.port: 5601
 - server.host: "0.0.0.0"
 - elasticsearch.url: "http://192.168.1.51:9200"
 - kibana.index: ".kibana"
 - kibana.defaultAppId: "discover"
 - elasticsearch.pingTimeout: 1500
 - elasticsearch.requestTimeout: 30000
 - elasticsearch.startupTimeout: 5000

Kibana安装与配置(续3)

- kibana.yml的配置
 - 除elasticsearch.url需要配置为我们ES集群的地址之外,其他保持默认值
 - 设置开机启动 systemctl enable kibana
 - 启动服务 systemctl start kibana
 - web访问kibanahttp://192.168.1.56:5601/

案例1:安装Kibana

- 1. 安装Kibana
- 2. 配置启动服务查看5601端口是否正常
- 3. 通过web页面访问Kibana

Kibana 部分

• 数据导入以后查看logs是否导入成功

Kibana 部分(续1)

 修改Kibana的配置文件后启动Kibana,然后查看ES 集群,如果出现.kibana Index表示Kibana与ES集群 连接成功

Kibana 部分(续2)

- Kibana里选择日志
 - 支持通配符 *
 - 我们这里选择logstash-*
 - 在下面的Time-field选择@timestramp作为索引
 - 然后点create按钮

Kibana 部分(续3)

Configure an index pattern

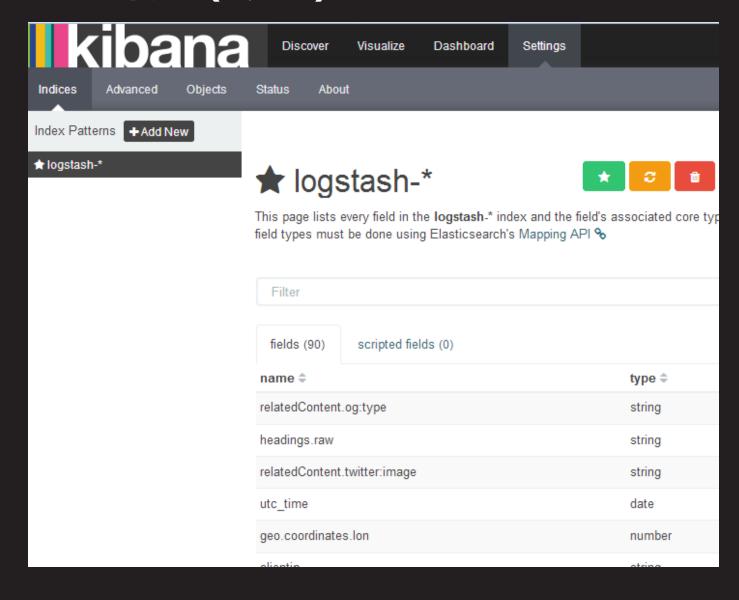

In order to use Kibana you must configure at least one index pattern. Index patterns are used to identify the Elasticsearch index to run search and analytics against. They are also used to configure fields.

✓ Index contains time-based events
Use event times to create index names [DEPRECATED]
Index name or pattern
Patterns allow you to define dynamic index names using * as a wildcard. Example: logstash-*
logstash-*
Do not expand index pattern when searching (Not recommended)
By default, searches against any time-based index pattern that contains a wildcard will automatically be expanded to query only the indices that contain data within the currently selected time range.
Searching against the index pattern logstash-* will actually query elasticsearch for the specific matching indices (e.g. logstash-2015.12.21) that fall within the current time range.
Time-field name 6 refresh fields
Create

Kibana 部分(续4)

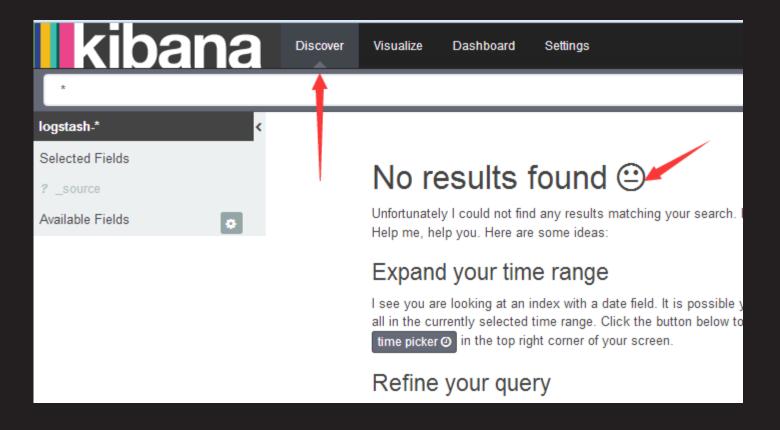

Kibana 部分(续5)

• 导入成功以后选择Discover

Kibana 部分(续6)

 这里没有数据的原因是我们导入的日志是2015-05-10至2015-05-20的时间段,默认配置是最近15分钟, 在这可以修改一下时间来显示

Kibana修改时间

• 修改时间

Kibana修改时间(续1)

Kibana数据展示

• 数据展示

Tedu.cn 达内教育

Kibana展示方式

• 除了柱状图, Kibana还支持很多种展示方式

	Area chart	Great for stacked timelines in which the total of all series is more important than comparing any two or more series. Less useful for assessing the relative change of unrelated data points as changes in a series lower down the stack will have a difficult to gauge effect on the series above it.
=	Data table	The data table provides a detailed breakdown, in tabular format, of the results of a composed aggregation. Tip, a data table is available from many other charts by clicking grey bar at the bottom of the chart.
✓	Line chart	Often the best chart for high density time series. Great for comparing one series to another. Be careful with sparse sets as the connection between points can be misleading.
	Markdown widget	Useful for displaying explanations or instructions for dashboards.
	Metric	One big number for all of your one big number needs. Perfect for showing a count of hits, or the exact average a numeric field.
(Pie chart	Pie charts are ideal for displaying the parts of some whole. For example, sales percentages by department. Pro Tip: Pie charts are best used sparingly, and with no more than 7 slices per pie.
•	Tile map	Your source for geographic maps. Requires an elasticsearch geo_point field. More specifically, a field that is mapped as type:geo_point with latitude and longitude coordinates.
latil	Vertical bar chart	The goto chart for oh-so-many needs. Great for time and non-time data. Stacked or grouped, exact numbers or percentages. If you are not sure which chart you need, you could do worse than to start here.

Kibana展示方式(续1)

k	oana	Discover	Visualize	Dashboard	Settings	
	Select a s	earch	sour	ce		
	From a new search	_				
	From a saved search					

Kibana展示方式(续2)

n	netrics		
	Slice Size		Count
b	uckets		
	Select buckets typ	oe .	
	% Split Slices	_	
	iii Split Chart		
		Cancel	

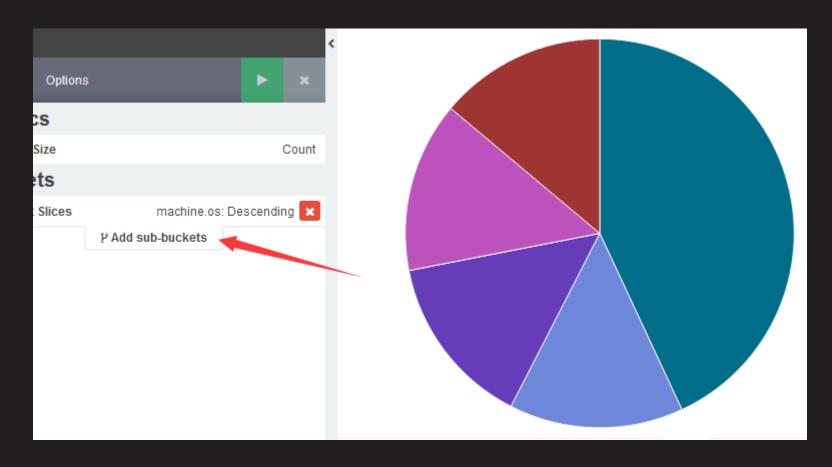

Kibana展示方式(续3)

Slice Size	Count
buckets	
Split Slices	×
Aggregation	
Terms	
Field	
Order By	
metric: Count	•
Order Size	
Descendinç ▼ 5	A
CustomLabel	

Kibana展示方式(续4)

Kibana展示方式(续5)

Kibana展示方式(续6)

• 列表与饼图

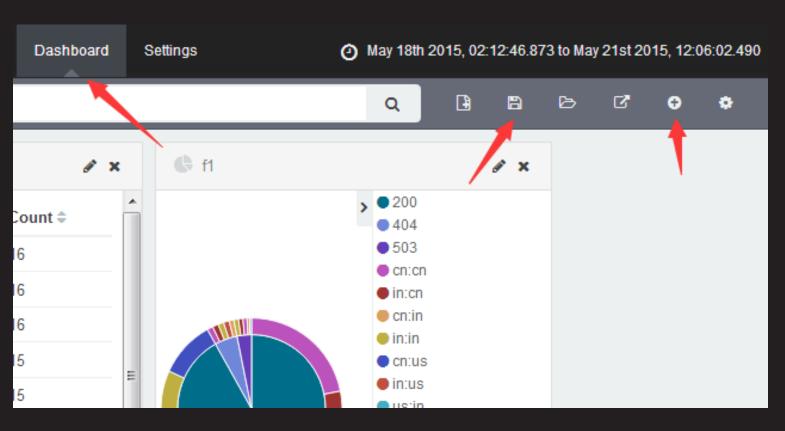

Kibana展示方式(续7)

• 保存后可以在Dashboard查看

Logstash配置扩展插件

Logstash配置扩展插件

Logstash

Logstash

Logstash安装

Logstash类型及条件判断

Logstash配置文件

插件

filebeat安装配置

Logstash

Logstash是什么

- 是一个数据采集、加工处理以及传输的工具
- 特点
 - 所有类型的数据集中处理
 - 不同模式和格式数据的正常化
 - 自定义日志格式的迅速扩展
 - 为自定义数据源轻松添加插件

Logstash安装

- Logstash安装
 - Logstash依赖Java环境,需要安装java-1.8.0-openjdk
 - Logstash没有默认的配置文件,需要手动配置
 - Logstash安装在/opt/logstash目录下

yum -y install logstash

Logstash安装(续1)

• Logstash工作结构

Logstash类型及条件判断

Logstash里面的类型

- 布尔值类型: ssl_enable => true

- 字节类型: bytes => "1MiB"

- 字符串类型: name => "xkops"

- 数值类型: port => 22

– 数组: match => ["datetime","UNIX"]

- 哈希: options => {k => "v",k2 => "v2"}

- 编码解码: codec => "json"

– 路径: file_path => "/tmp/filename"

- 注释: #

Logstash类型及条件判断(续1)

• Logstash条件判断

- 等于: ==

- 不等于: !=

- 小于: <

- 大于: >

- 小于等于: <=

- 大于等于: >=

- 匹配正则: =~

- 不匹配正则:!~

Logstash类型及条件判断(续2)

• Logstash条件判断

- 包含: in

- 不包含: not in

- 与: and

- 或: or

- 非与: nand

- 非或: xor

- 复合表达式: ()

- 取反符合: !()

Logstash配置文件

- Logstash的第一个配置文件
 - /etc/logstash/logstash.conf

```
input{
    stdin{}
}
filter{ }
output{
    stdout{}
}
```

• 启动并验证

logstash -f logstash.conf

Tedu.cn 达内教育

插件

- Logstash插件
 - 上页的配置文件使用了logstash-input-stdin和 logstash-output-stdout两个插件, Logstash还有 filter和codec类插件,查看插件的方式是
 - # /opt/logstash/bin/logstash-plugin list
 - 插件及文档地址https://github.com/logstash-plugins
- 练习
 - Logstash配置从标准输入读取输入源,然后将结果输出到屏幕

插件(续1)

- codec类插件
 - 常用的插件: plain、json、json_lines、rubydebug、multiline等
 - 使用刚刚的例子,这次输入json数据
 - 设置输入源的codec是json,在输入的时候选择 rubydebug

插件(续2)

· codec类插件

```
input{
    stdin{ codec => "json" }
}
filter{ }
output{
    stdout{ codec => "rubydebug" }
}
```

• 输入普通数据和json对比

```
{"a": 1, "c": 3, "b": 2}
```

插件(续3)

- codec类插件
 - 练习output和input配置
 - 练习在input不指定类型json输出结果
 - 练习在output不指定rubydebug的输出结果
 - 同时指定以后的输出结果

插件(续4)

• 练习input file插件

```
file{
    start_position => "beginning"
    sincedb_path => "/var/lib/logstash/sincedb-access"
    path => [ "/tmp/a.log" , "/tmp/b.log" ]
    type => 'filelog'
}
```

- sincedb_path记录读取文件的位置
- start_position配置第一次读取文件从什么地方开始

Tedu.cn 达内教育

插件(续9)

- filter grok插件
 - 解析各种非结构化的日志数据插件
 - grok使用正则表达式把飞结构化的数据结构化
 - 在分组匹配,正则表达式需要根据具体数据结构编写
 - 虽然编写困难,但适用性极广
 - 几乎可以应用于各类数据

Tedu.cn 达内教育

插件(续10)

- grok正则分组匹配
 - 匹配ip时间戳和请求方法

```
"(?<ip>(\d+\.){3}\d+) \S+ \S+ (?<time>.*\])\s+\"(?<method>[A-Z]+)"]
```

- 使用正则宏

```
%{IPORHOST:clientip} %{HTTPDUSER:ident} %{USER:auth} \[%{HTTPDATE:timestamp}\] \"%{WORD:verb}
```

- 最终版本

```
%{COMMONAPACHELOG} \"(?<referer>[^\"]+)\"
\"(?<UA>[^\"]+)\"
```

插件(续11)

output ES插件

```
if [type] == "filelog"{
    elasticsearch {
        hosts => ["192.168.1.51:9200", "192.168.1.52:9200"]
        index => "filelog"
        flush_size => 2000
        idle_flush_time => 10
    }}
```

- 调试成功后,把数据写入ES集群

插件(续12)

input filebeats插件

这个插件主要用来接收beats类软件发送过来的数据,由于logstash依赖JAVA环境,而且占用资源非常大,因此会使用更轻量的filebeat替代

filebeat安装配置

- filebeat安装与配置
 - 使用rpm安装filebeat

```
# yum -y install filebeat
```

- 修改配置文件/etc/filebeat/filebeat.yml
- 设置开机运行

systemctl enable filebeat

- 开启服务

systemctl start filebeat

filebeat安装配置(续1)

• 修改配置文件/etc/filebeat/filebeat.yml

```
paths:
    - /root/logs.jsonl
    document_type: weblog
... ...
paths:
    - /root/accounts.json
    document_type: account
output:
    logstash:
        hosts: ["192.168.1.57:5044"]
```

案例2:综合练习

- 1. 安装配置 beats 插件
- 2. 安装一台Apache服务并配置
- 3. 使用filebeat收集Apache服务器的日志
- 4. 使用grok处理filebeat发送过来的日志
- 5. 存入elasticsearch
- 6. 使用 kibana 做图形展示

总结和答疑
